

Food provision and livelihoods - Porsangerfjorden

Objective: Identify components and understand processes in social-ecological systems that are likely to shift in abundance and location in the future.

Camilla Risvoll and Majken Paulsen

How Arctic biodiversity changes will affect coastal food provisions and livelihoods?

What are the interdependencies between environmental changes and Arctic livelihoods?

How human activities near the fjord have impact on biodiversity?

What are the risks and the opportunities for the local community?

LITERATURE REVIEW

WORKSHOPS & INTERVIEWS

DATA ANALYSIS

How will fisheries and food systems related to the fjord evolve in Porsangerfjorden and what will be the consequences for the local community?
